Carlos Gouveia

Data Analyst · Python · SQL · Power BI · Exploratory Analysis and Data Quality

São Paulo, Brazil · arcanospeedruns@gmail.com · linkedin.com/in/carloslnly · github.com/arcanospeedruns

SUMMARY

Data analyst with experience in clinical research, focused on exploratory analysis, data cleaning and data quality. I build Python (pandas) pipelines to consolidate and standardize datasets, apply descriptive statistics to investigate the data and deliver indicators in dashboards used for decision-making. Fluent English, with two years of professional work alongside international teams. Computer Science student at PUC-SP and graduate in Systems Analysis and Development.

EXPERIENCE

Data Analyst (Intern) | Cignamed *May 2026 – Oct 2026*

- Exploratory data analysis in a case-control clinical study, investigating the distribution, dispersion and inconsistencies of variables before analysis.
- Built and maintained data collection instruments in REDCap, structuring forms, field types and validation rules to prevent inconsistencies at the source.
- Built Python pipelines (pandas, openpyxl) for ingestion, consolidation, standardization and recoding of categorical variables.
- Merged three databases with different codes and naming (1,900 respondents × 500 questions, about 950K answers) into a single dataset through automatic column matching: a process that took about 2 months now takes around 2 minutes.
- Data quality audit: 200+ duplicates and hundreds of inconsistencies (out-of-range dates and ages, badly formatted values) identified and fixed, with corrections documented in a traceable log.
- Calculated scores and derived variables from standardized research instruments.
- Structured data collection templates and documented variable dictionaries, ensuring consistency across different sources.
- Developed dashboards and web applications to visualize indicators and support decision-making.

Product and Data Analyst | OrderHub (freelance) *Mar 2025 – Jul 2025*

- Defined KPIs and tracking metrics for the product and operation, building the management reports used by leadership, working under Agile practices.
- Mapped data sources and information flows: data origins, transformation rules at each stage and consumers of each output.
- Defined business rules and wrote functional documentation of workflows and dependencies between stages.
- Monitored deliverables, tests and validations, ensuring results matched the defined rules.
- Worked in English with an international team in planning and refinement meetings.

Project Manager | BlazingBoost (freelance) *Jan 2025 – Dec 2025*

- Coordinated 2 teams of 6 people serving 30 clients simultaneously in an international operation, using Agile practices.
- Mapped and documented operational workflows, business rules and dependencies between process stages.
- Gathered requirements from stakeholders and translated them into actionable specifications.
- Ongoing communication and alignment in English with international teams and clients.

TECHNICAL SKILLS

Programming: Python (pandas, openpyxl) · SQL (PostgreSQL) · C/C++ · JavaScript
Data analysis: Exploratory analysis · Descriptive statistics (central tendency, dispersion, percentiles and skewness) · Data mining and dataset cross-referencing · Data quality and standardization
Data modeling: Granularity and key definition · Standardization across heterogeneous sources · Data dictionaries · Layered structure (raw, clean, analytical)
Tools: REDCap · Power BI · Advanced Excel · Git · Notion · HTML/CSS
Languages: Portuguese (native) · English (fluent, professional work with international teams)

EDUCATION

B.Sc. in Computer Science | PUC-SP *expected 2027*

Technologist Degree in Systems Analysis and Development | Anhembi Morumbi University *completed*

Technical Diploma in Graphic Design | Etec Carlos de Campos *completed*
